### **DETAILED ACTION**

This office action is in response to the amendment filed September 3, 2002 for the above identified patent application.

#### ***Drawings***

1. The proposed drawing correction and/or the proposed substitute sheets of drawings, filed on September 3, 2002 have been approved. A proper drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The correction to the drawings will not be held in abeyance.

#### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 38 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The newly amended limitation "said contact area at said low-load condition is located at a substantially different position from said contact area at said higher load condition" is not fully understood because Figure 4A illustrates the low-load contact area being the same as a portion of the high-load contact area of Figure 4B. More clearly, the high-load contact area encompasses the low-load contact

area, and therefore the contact areas are not located in substantially different positions.

***Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claim 38 is rejected under 35 U.S.C. 102(b) as being anticipated by Visser (USP 3,122,938).

Visser discloses a gear arrangement (Figs. 13-15) comprising a worm (100) and a flexible worm gear (102) in double flank engagement with the worm. Due the flexibility of the gear arrangement, it is understood that the contact area between the worm and the worm gear in a low-load condition is smaller than the contact area at a higher load condition.

***Allowable Subject Matter***

6. Claims 1-25, 27-37, 39-41, and 43-46 are allowed.

***Response to Arguments***

7. With respect to claim 38, Applicant's arguments filed September 3, 2002 are not persuasive. Specifically, it is understood that the gear arrangement of Visser will inherently having a contact area between the worm and the worm gear in a low-load

condition which is smaller than the contact area at a higher load condition, wherein the contact area at the low load condition is located at a substantially different position from the contact area at said higher load condition.

### ***Conclusion***

8. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
